Vaccination app and responsive website

Margarida Yokochi

Google

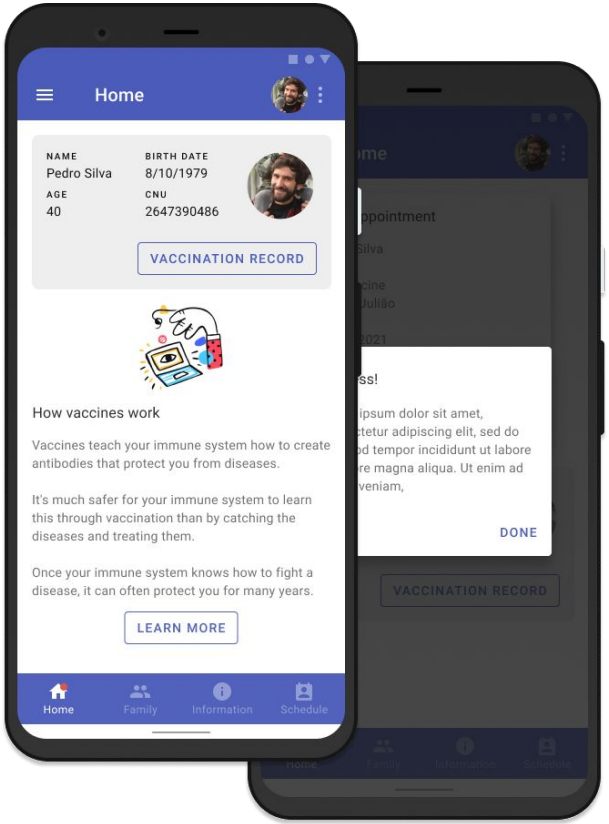
Project overview

The product:

The vaccination app and responsive website aim to help the community guarantee access to vaccines. The main goal of the product is to improve the way users book and manage vaccine appointments.

Project duration:

November 2021 (2 weeks)



Google

Project overview

The problem:

Busy parents have to spend time dealing with inefficiencies in the vaccination system.

The goal:

Create an intuitive experience that lets users book and manage vaccines.

Project overview

My role:

UX designer and researcher designing a vaccination app and website from conception to delivery.

Responsibilities:

Conducting interviews, paper and digital wireframing, low and high-fidelity prototyping, conducting usability studies, accounting for accessibility, and iterating on designs.

Understanding the user

- User research
- Personas
- Problem statements
- Competitive audit
- Ideation

User research: summary

I conducted interviews and created empathy maps to understand the users I'm designing for and their needs. Two primary user groups identified through research were young adults who experienced frustrations with current system for booking vaccines and parents who have to manage the vaccines for family members at their care.

These user groups revealed that users were looking for a simpler and more effective way book and manage vaccines, that would help them save time.

Persona 1: **Sofia**

Problem statement:

Sofia ia a healthcare professional who needs a reliable way to stay on top of her vaccinations because she needs to protect the vulnerable people she works with.

"I care about the people around me and do my best to keep them safe"

Goals

- Access relevant information about the vaccines
- Schedule and manage appointments

Frustrations

- Miscommunication about changes with vaccine centres
- Long waiting times

Sofia

Age: 33
Education: Nursing BA
Hometown: Lisbon
Family: Partner
Occupation: Nursing home professional

Sofia is a healthcare professional who works in a nursing home. Because of the fragile nature of the people she cares for and interacts with everyday, she needs to take extra health measures that include taking the yearly vaccine shot. She has a busy schedule and often experiences frustrations with inefficiencies while booking and managing her vaccines.

Persona 2: **Pedro**

Problem statement:

Pedro is a busy parent who needs an effective way to manage his son's vaccinations because it's challenging to coordinate raising a child with his professional life.

Pedro

Age: 40
Education: Media studies MA
Hometown: Lisbon
Family: Partner and son
Occupation: Photographer

"Time management and coordination with my partner is crucial to me"

Goals

- Schedule and manage his child's appointments
- Coordinate all health health related matters with his partner

Frustrations

- Miscommunication about changes with vaccine centres
- Long waiting times
- Coordination with his partner

Pedro is a photographer who has to coordinate an unconventional working schedule with raising a child. Because he is often more available during the daytime, he often takes care of health related matters regarding his son. When it comes to keeping track of vaccines, he would like to have a dedicated system that would help him save time and coordinate better with his partner,

Competitive audit

An audit on a few competitors provided insight on gaps and opportunities for the vaccination app.

Competitive audit

Compare the seat booking experience of each competitor's movie theatre app

	General information								First impressions		
	Competitor type (direct or indirect)	Location(s)	Product offering	Price ($ - $$$$)	Website (URL)	Business size (small, medium, large)	Target audience	Unique value proposition	Desktop website experience	App or mobile website experience	Features
Nos Cinemas	Direct	Portugal	Latest comercial movies	$$	https://cinemas.nos.pt	Large	Teenagers and working adults	Offers a variety of movies in numerous locations	**Okay** + Simple - No way to save progress	**Okay+ Intuitive** - Needs portuguese phone number - Uncommon design patterns	**Okay** + Enough fea overwhelmin - No sign in o
Pathé	Indirect	Netherlands	Latest comercial movies	$$$	https://en.pathe.nl	Large	Teenagers and working adults	The latest movies in many locations	**Okay** + Intuitive - No way to go back	**Needs Work** - Unusable - Very slow	**Okay** + Relevant fe - Couldn't us

	General information								UI (rated: needs work, okay, good, or outstanding)									
									First impressions		Interaction					Visual design	Content	
	Competitor type (direct or indirect)	Location(s)	Product offering	Price ($ - $$$$)	Website (URL)	Business size (small, medium, large)	Target audience	Unique value proposition	Desktop website experience	App or mobile website experience	Features	Accessibility	User flow	Navigation	Brand identity	Tone	Descriptiveness
Nos Cinemas	Direct	Portugal	Latest comercial movies	$$	https://cinemas.nos.pt	Large	Teenagers and working adults	Offers a variety of movies in numerous locations	**Okay** + Simple - No way to save progress	**Okay**- Intuitive - Needs portuguese phone number - Uncommon design patterns	**Okay** + Enough features without becoming overwhelming - No sign in with apple or google	**Okay** + Protective seat options + Good contrast - Only one language	**Okay** + Nice progress indicator + Straightforward flow - Some strange design elements	**Good** + Basic navigation + Clickable elements are clear	**Good** + Strong brand identity + Use of brand colours as accents + Use of logo as a visual element	To the point and slightly formal	**Good** + Information is relevant + Offers the possibility to access more info
Pathé	Indirect	Netherlands	Latest comercial movies	$$$	https://en.pathe.nl	Large	Teenagers and working adults	The latest movies in many locations	**Okay** + Intuitive - No way to go back	**Needs Work** - Unusable - Very slow	**Okay** + Relevant features - Couldn't use anymore	**Needs Work** - Only one language	**Good** + Navigation follows design patterns	**Good** + Simple tab bar + Relevant features	**Good** + Uses monochrome elements like colour	Straightforward tone	**Needs Work** - Couldn't access any of the app to tell
UCI	Direct	Portugal, Italy, Brazil, Germany	Latest comercial movies	$$$	https://www.ucicinemas.pt	Large	Working adults	Focused on the whole experience of customers on any of their cinemas	**Needs Work** + Simple navigation - Poor visual design	**Okay** + Very Fast - Unexpected visual elements	**Good** + Relevant features - The same menu in 2 different places	**Needs Work** - Only one language	**Needs Work** - Not enough feedback - Unexpected interactions	**Needs Work** - Looks like a web menu - Same navigation in two spots	**Needs Work** - Inconsistent icons - Lack of brand identity	Formal tone and not a lot of guidance through the experience	**Needs Work** - Not enough information

Google

Ideation

I did a quick ideation exercise to explore insights from the research and competitive audit. My focus was on ways to **manage multiple family members** from one account and how to let users **receive relevant information** about the vaccines.

Google

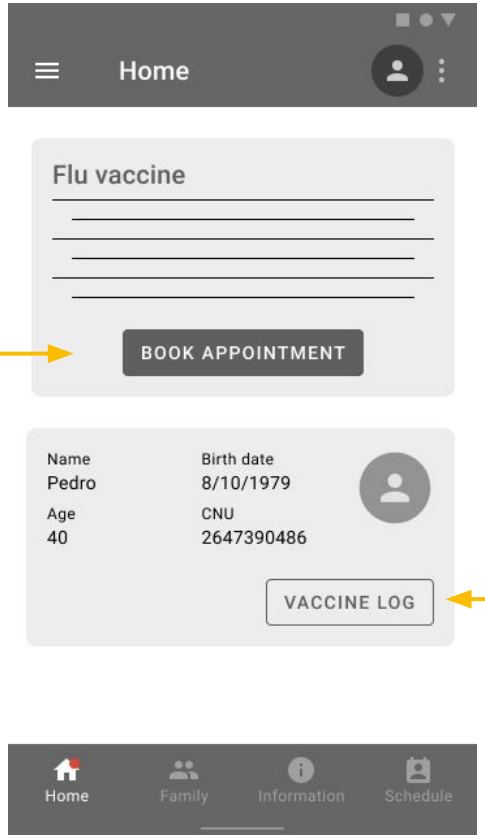
Starting the design

- Digital wireframes
- Low-fidelity prototype
- Usability studies

Digital wireframes

After ideating and drafting some paper wireframes, I turned my ideas into digital wireframes. These designs focused on the flow to schedule an appointment for a vaccine.

A notification reminds users and lets them book an appointment from the home screen

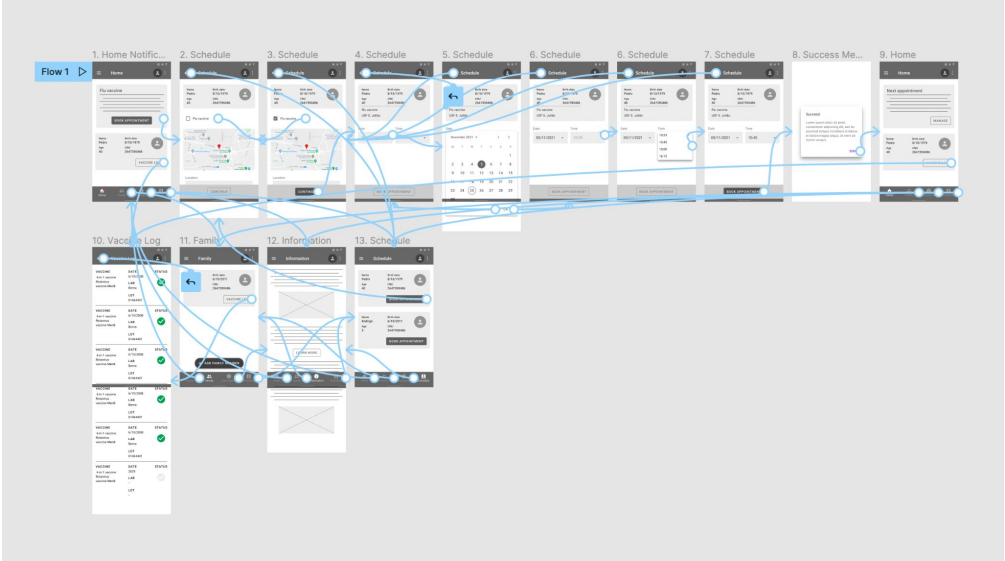


The users vaccination log is easy to access providing the records of previous and future vaccines

Google

Low-fidelity prototype

I created a low-fidelity prototype with the complete set of digital wireframes. The primary user flow I wanted to test in a usability study was booking an appointment for a vaccine.



View the Vaccination [low-fidelity prototype]

Usability study: parameters

Study type:

Moderated usability study

Location:

Lisbon, Portugal

Participants:

5 participants

Length:

15-20 minutes

Usability study: findings

I conducted a usability study to gain insight on how to improve the initial designs.

1

Finding

Users liked the feature to manage family members at their care but wanted more information on this process.

2

Finding

Users wanted the possibility to add scheduled appointments to their calendars and reminders closer to the date of the appointment.

3

Finding

Users found the order of the vaccination log confusing. They wanted to be able to see the next vaccination more clearly.

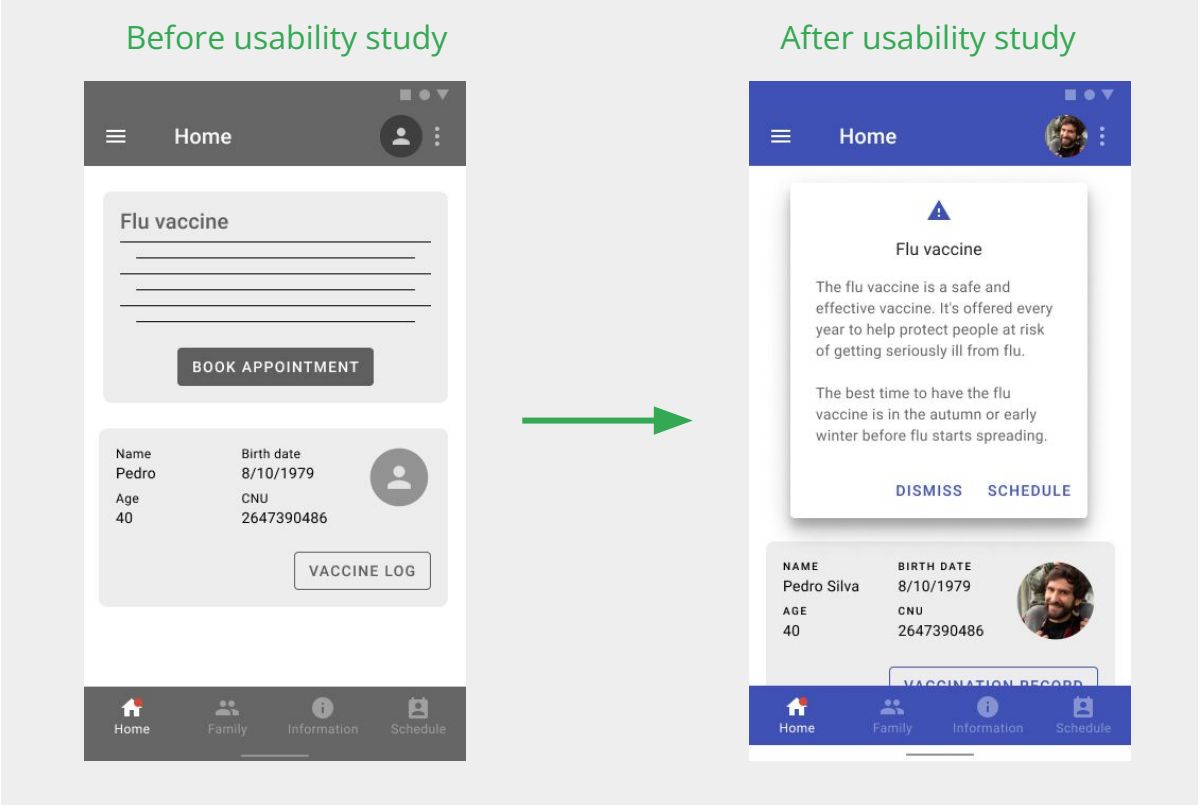
Google

Refining the design

- Mockups
- High-fidelity prototype
- Accessibility

Mockups

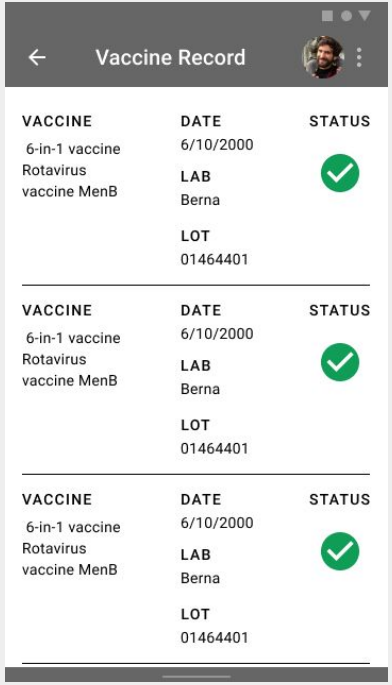
After the usability studies, I added the possibility for users to either **take action** on the notification or **dismiss it**.



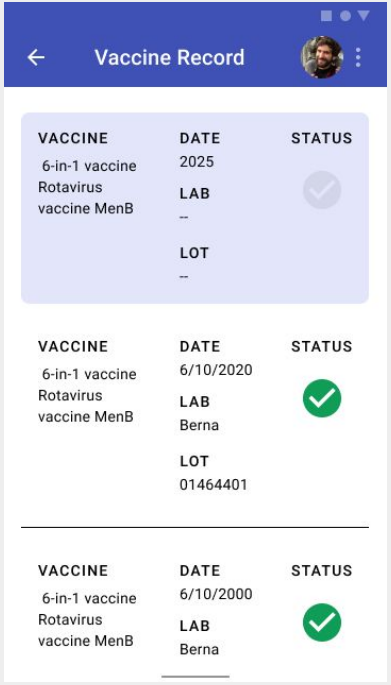
Mockups

I also changed the **order of the vaccine** record so that the most relevant information would appear at the top. I changed the colour of this section to give it some emphasis.

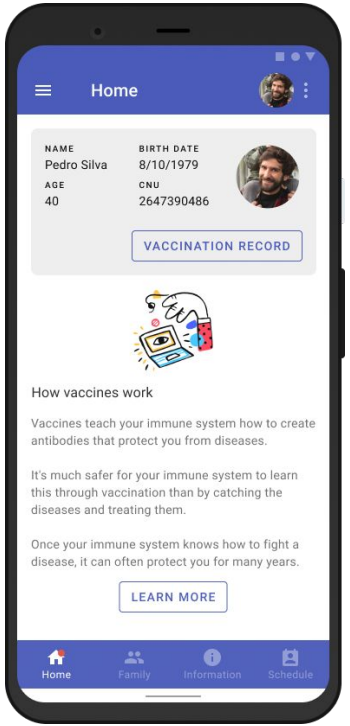
Before usability study

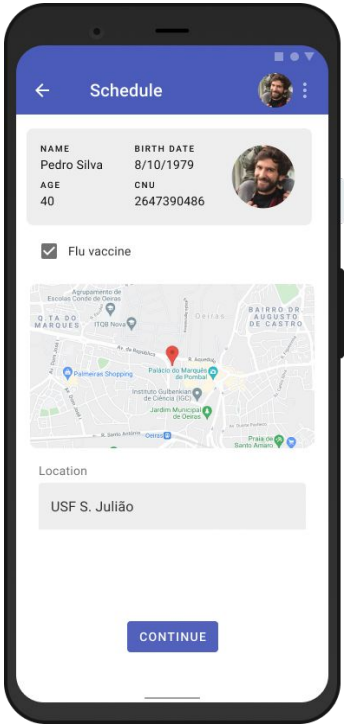


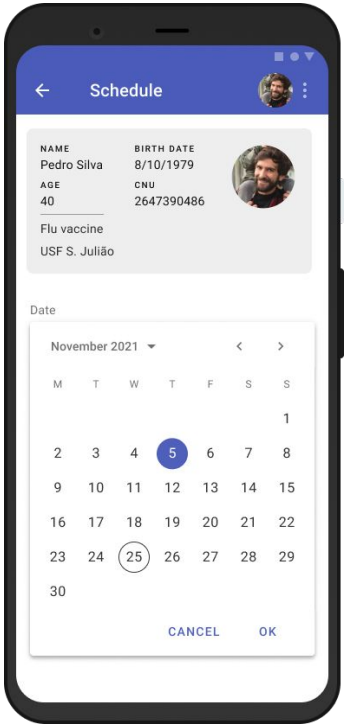
After usability study

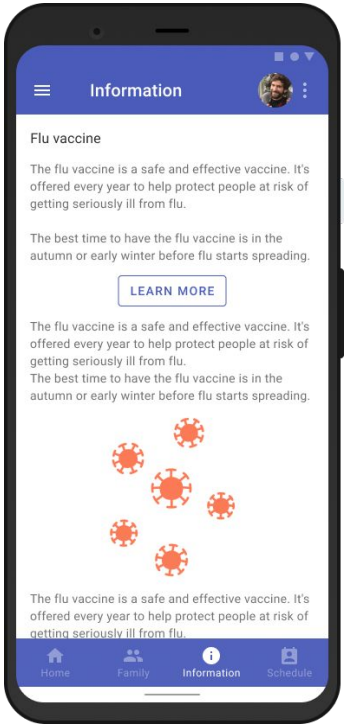


Mockups







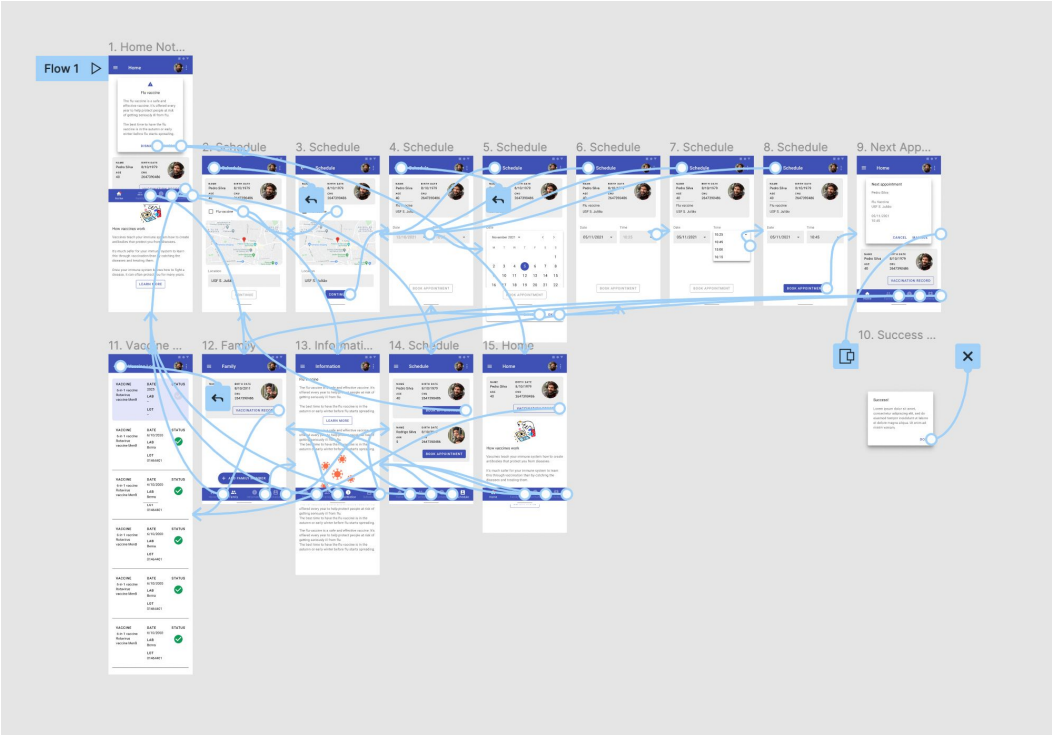


Google

High-fidelity prototype

The final high-fidelity prototype was more polished and helped users navigate the main flow of booking a vaccine appointment.

View the Vaccination [high-fidelity prototype]



Google

Accessibility considerations

1

Added alt text to images for screen readers to support users with impaired vision.

2

Used icons and descriptive language to make navigation easier.

3

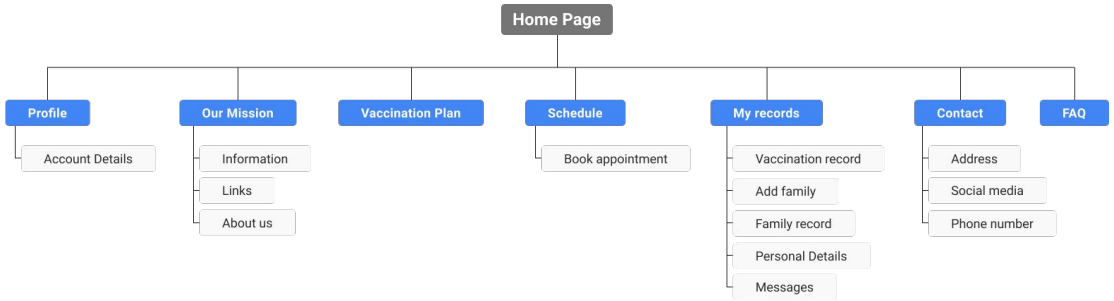
Checked colour contrast to comply with accessibility guidelines.

Responsive Design

- Information architecture
- Responsive design

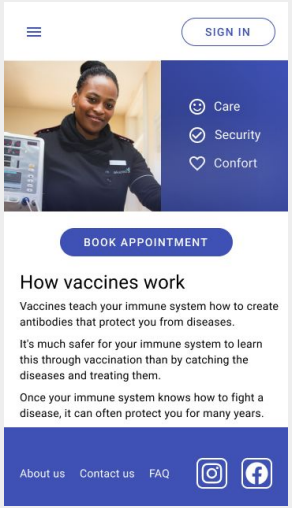
Sitemap

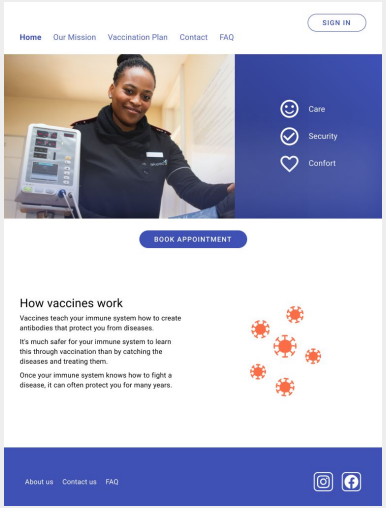
I created a sitemap for the responsive website considering the situations users might encounter. The website is more focused on sharing the organisation's mission and important information with users.

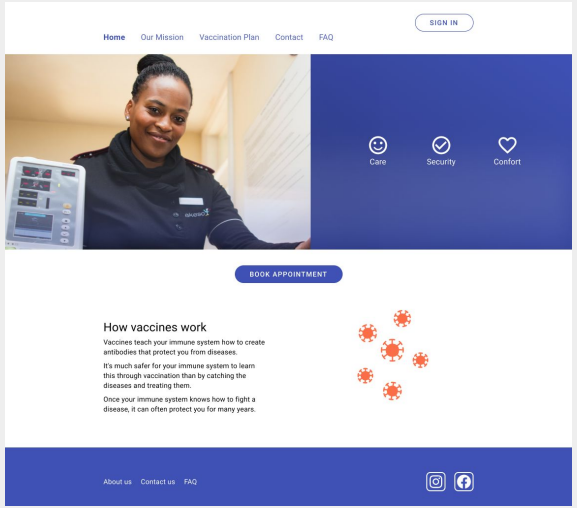


Responsive designs

The different size variations included mobile, tablet and desktop. I adjusted the designs to fit each screen size and respective user needs.







Going forward

- Takeaways
- Next steps

Takeaways

Impact:

Users shared that the Vaccination app had a great potential of helping them manage their health and save time.

What I learned:

While designing the Vaccination app and responsive website, I learned to adapt my designs to each situation users might encounter.

Next steps

1

Investigate the viability of integrating more health related exams in the product.

2

Add more educational resources to help reduce the spread of misinformation.

3

Validate whether the pain points users experienced have been effectively addressed with another round of usability studies.

Let’s connect!

Thank you for your time reviewing my work on the Vaccination app! If you’d like to see more or get in touch, my contact information is provided below.
